

Monitor the energy performance

Use your own tools

Your technical team have their own business skills (maintenance, space optimization, energy analysis...) but they don't usually have the capacity to retrieve the data of your buildings. They are even sometimes forced to use tools they didn't choose and which they don't fully master.

Linkspert™ organizes and structures metering data and operational data to make them understandable by third parties. Those data can be synchronized with applications of your choice so you can keep the control of the solutions being deployed for the building.

Export your data:

- With standard formats: CSV, JSON, SQL...
- Using connectors to databases: Elasticsearch, MongoDB...

Or use dedicated reporting tools

- Skyspark
- Power BI
- Kibana
- Tableau
- Grafana
- Data Studio
